shambhuraj960410054.b8732c886a8e@agentforce.com

Satara@123

Then go to setting then crete apex class and paste:

```
public class StudentSystemController {

    public String studentName {get; set;}
    public String course {get; set;}

    public void saveStudent() {

        Account acc = new Account();

        acc.Name = studentName + ' - ' + course;

        insert acc;

        ApexPages.addMessage(
            new ApexPages.Message(
                ApexPages.Severity.CONFIRM,
                'Student Record Saved Successfully'
            )
        );

        studentName = "";
        course = "";

    }
}
```

Create new visualforce page:

maincode

```
<apex:page controller="StudentSystemController">
```

<apex:form>

```
<apex:pageBlock title="Student Management System">
```

<apex:pageMessages />

```
<apex:pageBlockSection columns="1">

    <apex:inputText value="{!studentName}"
        label="Student Name"/>

    <apex:inputText value="{!course}"
        label="Course"/>

</apex:pageBlockSection>

<apex:commandButton value="Save Student"
    action="{!saveStudent}"/>

</apex:pageBlock>

</apex:form>

</apex:page>
```

And run at:

<https://orgfarm-69d6d0e1a9-dev-ed--c.develop.vf.force.com/apex/maincode>
